Easy!Flow Release Notes

New version release Easy!Flow V8.2

Columbus, OH, USA-December 28, 2008 - Easy! Software LLC, announced Today the release of a new version V8.2 of Easy!Flow which is an integrated development process control and management solution. It seamlessly integrates change management, issue tracking, configuration management, document control, quality assurance and peer review functions into a team-oriented collaboration tool. It improves team productivity, product quality and shortens project release cycles. Please visit www.wasysoftwarellc.com for more info.

New Features:

(1) Review Enhancement:

- A reviewer can classify a severity level to each comment made to any of the three types of comments (general-file-line comments). This additional information will not only benefit the author, but also can be used for quantitative analysis for quality assurance.
- Based on each comment, the author makes necessary corrections then changes the comment status either to “resolved” or “ignored”.
- An email notification is sent to the moderator. He can then based on the author’s comment decides to accept or reject the review.

These enhancements make the review process more efficient and create better collaboration among the team members.

(2) Document Control and Management:

- A user can download, delete or edit & upload an existing document, create a new one, view status and version history of a document.
- Documents are version controlled.
- An author can lock a document to prevent concurrent modification of the same document and only he or an administrator can unlock it.

This new feature can help better manage documents related to each project where you can list all version of a document, list all modification history, or simply having a centralized location for better document control.

(3) Configurable Time Tracking Enforcement for A Ticket:

- If the feature is enabled, a ticket’s Original Estimation(time needed) and Deadline are required before assignment.
- When an assignee marks a ticket as RESOLVED with FIXED resolution, s/he is required to fill in Hours Worked field.

This feature allow the administrator to better management the project and better manage the developers who’s efficiency affecting the delivery time of the project.

Easy!Flow Release Notes

(4) Risk Assessment:

- Each Target Milestone has a deadline associated with it.
- Many dynamic reports can be generated for monitoring and identifying scheduling or resources related risks. Furthermore, the report can be resorted based on different parameters such as ticket assignee, ticket deadlines, ticket type, etc. This option allows the manager to monitor the progress and better manage each project and also help on time delivery.

(5) Feature Management:

- A dependency tree view for all tickets that are from the same root (master) ticket. It provides an easy way to list all tickets and their relevant information related to a specific feature.

(6) Customer release management:

- Customer information management.
- Product and release mapping for each customer. An easy way to keep track of and to identify the product and its release number delivered to a specific customer.

This feature helps manage customer project and any known issues related to each customer.

(7) Support a new relationship “reference” among tickets. Easy!Flow can support two-dimensional (parent-child and reference) requirement matrix.

(8) Print UI main area: A printer friendly print utility so all the UI related graphical images are excluded.

(9) Save any current UI link as “saved link” for easy access or Shortcut access.

1.2 UI Change

The Punchlist Status and Time Tracking sub-menu items used to be under Query & Report main menu are moved to “Advanced Functions” main menu along with the two new features Risk Assessment and Feature Management.
